You're invited
to the future of military medicine...

MRDC Capability Days

April 25-26 & 27-28

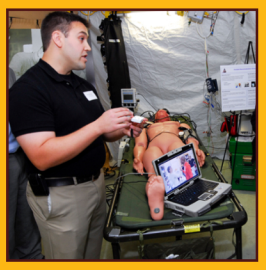
Fort Detrick, Maryland

THE FUTURE IS NOW

Experience interactive demos, collaborate on the next generation of research requirements and ensure your warfighters have what they need to respond to any medical threat.

View and test cutting-edge science & technology

Walk through a combat emergency room & operating room



Speak directly to the subject matter experts

Walk through the product development lifecycle

Come meet the team and learn how we develop the medical capabilities needed to fight and win on the battlefield.

From illness to injury, the U.S. Army Medical Research and Development Command is the only organization solely focused on research and development to address the military's unique medical readiness requirements. Our expert team, core capabilities and existing infrastructure allow us to rapidly respond to emerging infectious diseases and medical threats to our Warfighters.

Your capability needs or gaps can drive our Science & Technology/Advanced Development investments to develop materiel solutions.
